§ 2.1. Design Principles for the Basic Appearance

The following design principles apply to the design of the basic appearance stylesheet for form controls, in order of descending importance:

1. The styles are identical in every user agent.

drafts.csswg.org/css-forms-1

1. The styles are identical in every user agent.

2. The controls are recognizable and usable on their own without additional styles.

3. The controls pass 100% of WCAG 2.2 AA standards.

4. The styles are consistent across controls...

1. ...in look & feel.

2. ...in how they are defined in code.

4. The styles are consistent across controls...

1. ...in look & feel.

2. ...in how they are defined in code.

5. The styles are easily adapted to the website's branding, without needing complex reset stylesheets:
1. They use minimal code and are easy to override.
 2. They do not have a strong voice & tone of their own, and are visually as simple as possible.
 3. They inherit page styles rather than define new styles whenever possible.

Defaults matter!

Form control sizing

```
<textarea>  
First line  
Second line  
Third line  
Fourth line  
</textarea>
```

A rectangular box representing a text area. It contains two lines of text: "First line" on the top and "Second line" on the bottom. In the bottom right corner of the box, there are two short, parallel diagonal lines (//) indicating that the text can be edited.

```
<div>
First line<br>
Second line<br>
Third line<br>
Fourth line<br>
</div>
```

```
<style>
div {
    border: 1px solid;
    display: inline-block;
}
</style>
```

First line
Second line
Third line
Fourth line

field-sizing: content

123

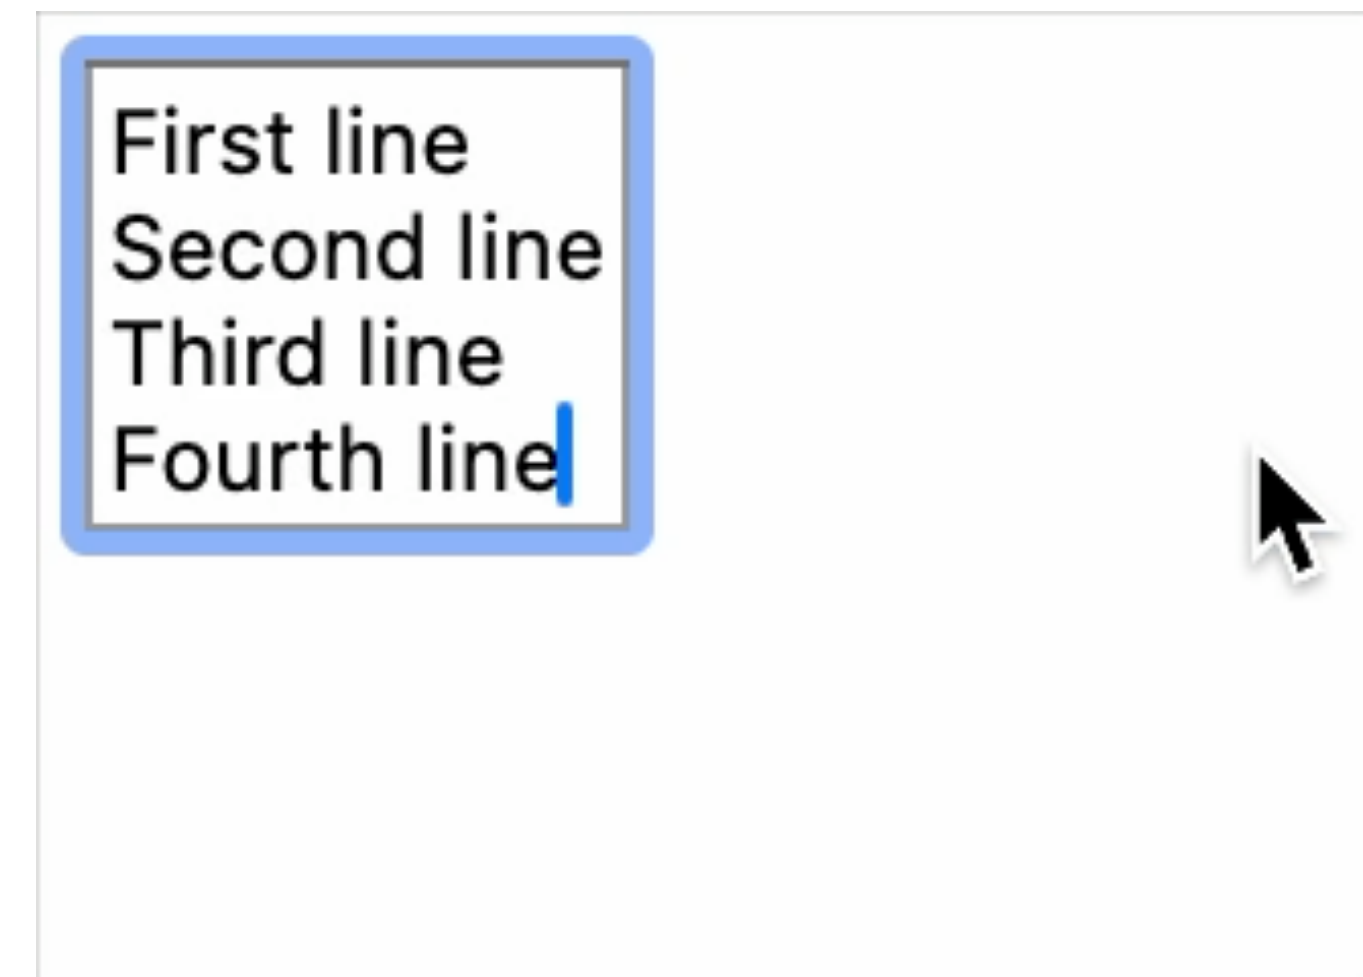

STP

X

```
<textarea>
First line
Second line
Third line
Fourth line
</textarea>
```

```
<style>
textarea {
  field-sizing: content;
  resize: none;
}
</style>
```

[css-forms-1] Should `field-sizing: content` be in base appearance stylesheet? #11838

Edit

New issue

Open

lukewarlow opened on Mar 5

...

It's unclear to me what the sizing model for base appearance styled elements are but it feels like `field-sizing: content` should be the default behaviour.

Create sub-issue

lukewarlow added `css-forms-1` on Mar 5

Select

Slide from Brecht (watch his talk!)

Select it! Styling new HTML UI capabilities

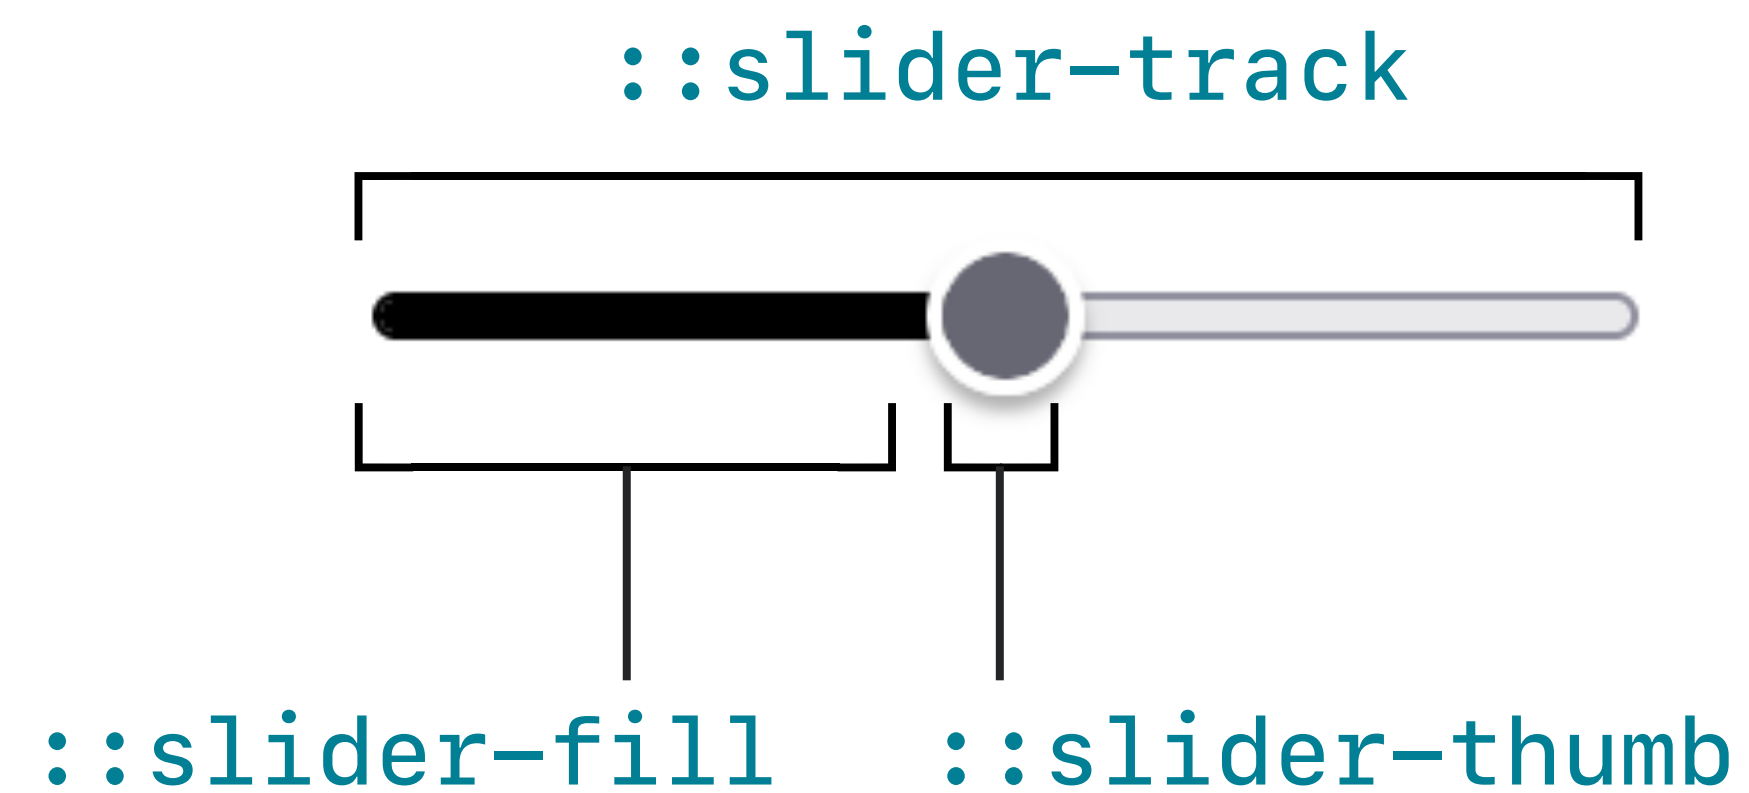

We are getting spoiled with increased UI capabilities, partially thanks to the efforts from the W3C community group Open UI. One of those features is the customizable select. This new capability for selects seems to love new CSS features, and that love is mutual.

This presentation is a love letter to W3C community groups, new UI capabilities, and CSS, showing you how to combine features such as anchoring, transitioning, scroll snapping, and much more to create fun, progressively enhanced, customized select elements.

Brecht de Ruyte

Sliders

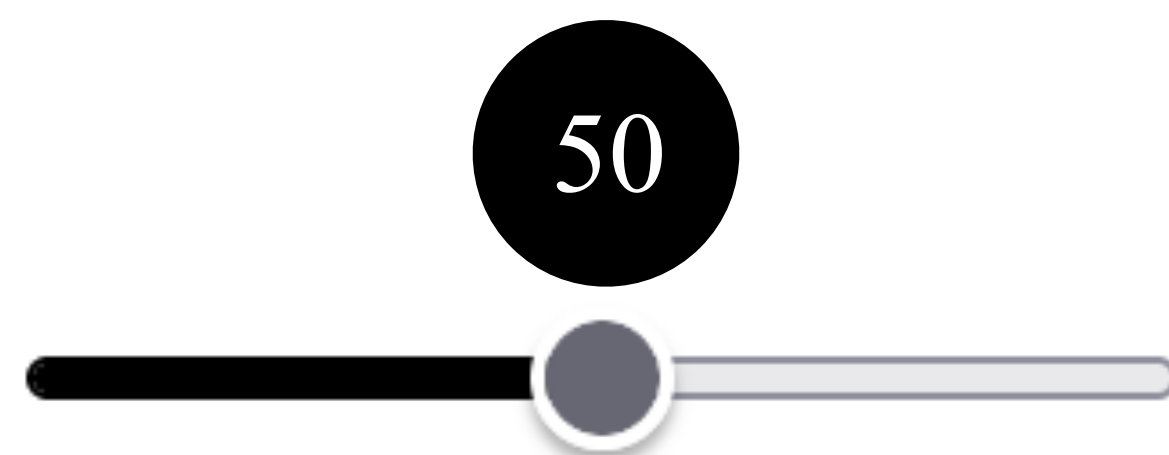

```
<input type="range">  
├ ::slider-track  
│ └ ::slider-fill  
└ ::slider-thumb
```

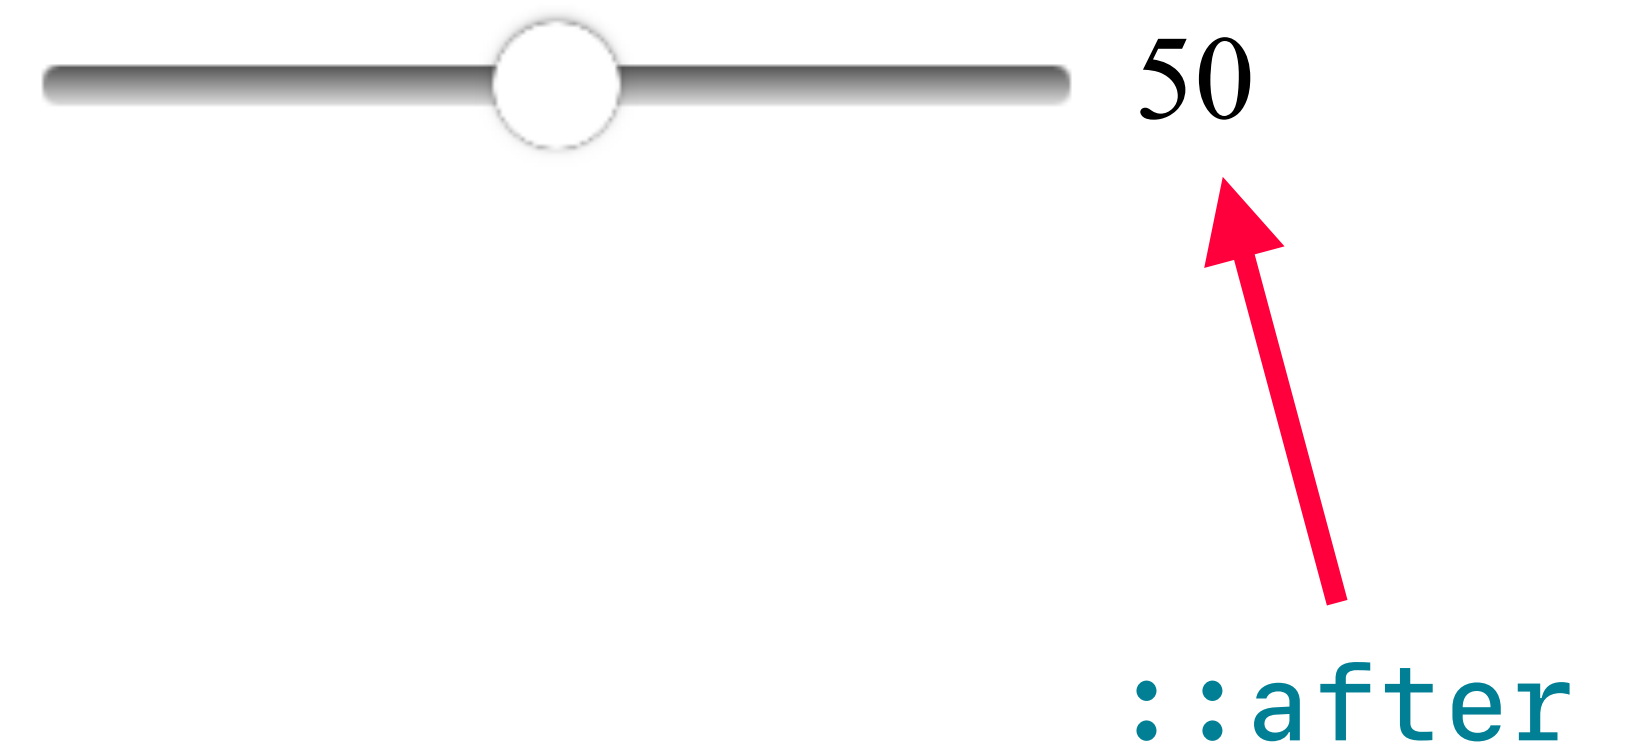

```
input.addEventListener("change", () => {  
    bubble.textContent = input.value;  
});
```

```
bubble.textContent = input.value;
```

control-value()

```
input[type=range]::after {  
  content: control-value();  
}
```

```
input[type=range]::after {  
  content: control-value();  
  background-color: black;  
  color: white;  
}
```

```
input[type=range]::after {  
  content: control-value();  
  background-color: black;  
  color: white;  
  
  /* Sizing */  
  display: inline-block;  
  width: 2em;  
  aspect-ratio: 1;  
}
```

```
input[type=range]::after {  
  content: control-value();  
  background-color: black;  
  color: white;  
  
  /* Sizing */  
  width: 2em;  
  aspect-ratio: 1;  
  
  /* Alignment */  
  display: inline-grid;  
  place-content: center;  
}
```

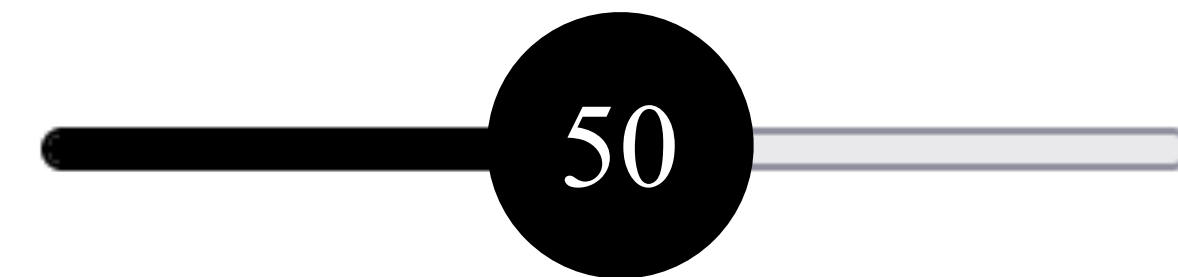

```
input[type=range]::after {  
  content: control-value();
